Flexibraid

- Braided polyester monofilament expandable sleeving
- Highly flexible covering

Flexibraid is a braided monofilament with very high flexibility which will easily deform without permanent distortion.

Unlike heat shrink sleeveings, Flexibraid is supplied in the unexpanded state. Its diameter is enlarged very quickly by the simple mechanical action of pushing from one end. This allows the component to be introduced and then held securely when the pressure is released.

• applications

Flexibraid uses exploit the combination of protection against abrasion and retention of flexibility.

- cable management
- hose protection
- flexible drives

• property summary

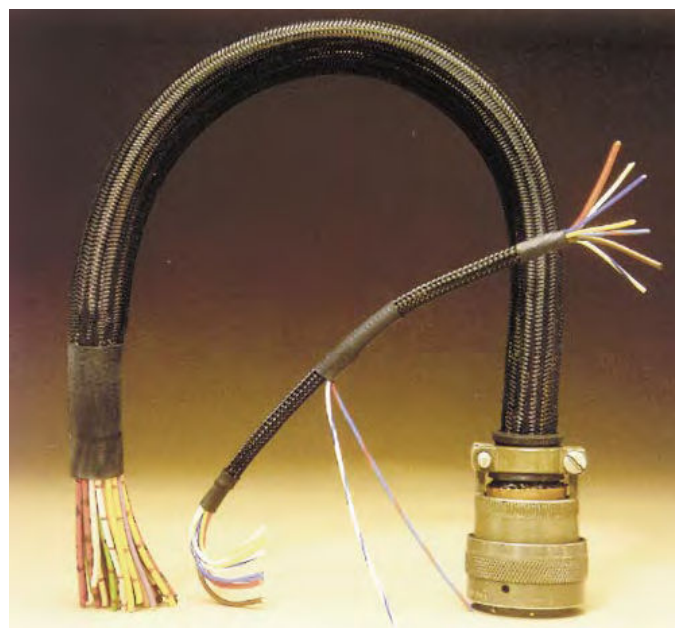

- operating temperatures -50°C to 150°C
- abrasion resistance very high
- flexibility very high

• colour range

black or grey

• sizes available

Ordering Code	Layflat / mm	Bundle diameter that can be covered, mm
HPP4	6	4 - 7
HPP5	7	5 - 9
HPP10	13	10 - 17
HPP15	17	13 - 22
HPP20	20	15 - 25
HPP25	25	25 - 38
HPP40	40	38 - 50
HPP50	60	50 - 80
